

3 & 4 December 2009
Cité Centre de congrès

With the partnership of :

An international event dedicated to the LED market and technology

LED technology has become established in many areas: lighting, display, signing, mobile and built-in applications, industrial and medical equipment...

New scientific advances in performance, colorimetry or standardisation have an influence on applications put on the market. Owing to the set of themes selected by a committee of experts, ForumLED will offer participants an objective state of play of the sector and a look at future developments, which is essential for a sound development strategy.

At ForumLED, researchers, R&D managers, component suppliers, equipment manufacturers, designers and investors... will all benefit from information at the leading edge of innovation.

High level conferences

Over two days, industrial and scientific experts will come together as part of a programme of conferences in which participants will take stock of the industry and think strategically about the development of the market. Each session shall be made up of several conferences, presented by persons who are international specialists in the areas covered, with simultaneous translation in English and French:

- Future developments
- LED technology
- LED packaging
- OLED technology
- Display
- Colour quality
- Characterisation, reliability, standardisation
- Drivers, controls
- Market challenges

Expo and workshops

Over **50 exhibitors** will present their innovations, based on LED technology. In addition, **technical workshops** will be held at the exhibition, reserved for professionals, free upon registering.
